

VitalfeldTherapy

Global Diagnostics

measuring

analysing

treating

A major challenge in medicine is the substantial increase of chronically ill patients with multiple ailments. Conventional diagnostics may reveal important indicators of strains, but rarely detect the underlying regulatory blockades hindering the body's healing. In case of multiple complaints, the question arises: which therapeutic stimulus does the body react to, if at all?

Each body part and every body system, whether healthy or diseased, has a specific reaction pattern to weak, external stimuli. On the basis of this reaction pattern, valuable conclusions can be drawn on the state and the functionality of the examined organs and systems.

Based on VitalfeldTechnology, a novel, physical measuring method has been developed with which energetic structures can be measured and visualised.

The novel measuring system Global Diagnostics automatically records and analyses the patient's energetic reaction pattern in less than ten minutes. The analysis covers more than 540 body objects like nerves, muscles, joints, organs etc. and 13 body systems. After the measurement has finished the results are displayed immediately.

Collecting and displaying of bioenergetic data with Global Diagnostics is based on pure physics. Thus, every medical practitioner or therapist benefits from the results, irrespective of his or her therapy methods. Once the unit is connected to the patient it automatically measures and independently analyses.

Options on request

The Global Diagnostics **therapy module** is an additional software option, available on request. This program unit provides a total of five different therapy applications. Each therapy can be adjusted to the patient's condition.

1. individually harmful frequencies
2. single frequencies
3. body systems
4. global scaling frequencies
5. multiple-frequency therapy

The Global Diagnostics **sample holder measurement** is another helpful tool, available on request. It is designed to establish how the oscillation pattern of a substance (in the sample holder) affects the organism. The results of the sample holder measurement may be saved to a file.

Important note: Since 1991, VITATEC products have been used successfully by a steadily increasing number of VitalfeldTherapists. The term "Vitalfeld" was coined by us. VitalfeldTechnology belongs to the area of complementary and alternative medicine and has not yet been recognized by conventional medicine.

- **Accurate and reliable**
fully automatic measurement and analysis
- **Time-saving and fast**
- **Non-invasive measurement**
- **Automatic verification of the correspondence between the patient's measurement results and more than 3000 digitised substance spectra** (allergens, homeopathic remedies, toxins etc.) up to three measurements may be compared statistically and any previous measurement may be analysed, substance groups are selectable
- **Identification of prevailing electromagnetic influences**
For the first time, the immediate electromagnetic influences (electrosmog) affecting the patient can be measured.
- **Ease of operation** (Windows standard)
- **Complete delivery**
measuring device and laptop with pre-installed and tested software
- **Software updates are available at regular intervals**
- **Comprehensive help texts**
- **Consistent user interface**
with our products MitoSoft², MitoPlus^{2a} and DigiSoft³
- **Consolidated patient data**
recording of all patient data in the same database as MitoSoft², MitoPlus^{2a} and DigiSoft³
- **Therapy success control**
During the course of treatment, you may carry out repeated measurements with Global Diagnostics to determine whether the therapy produces the desired results by energetic standards. Please note that a few days should be allowed between measurements. For VitalFeld therapists: adequate MitoSan or MitoPlus therapy programs⁴ are calculated and automatically suggested. They may be started directly.

nt data¹ – for a reliable diagnosis!

The measurement with Global Diagnostics is very easy to perform. The patient is connected to the Global Diagnostics device with electrodes attached to the ankles. After a preliminary electrosmog check, the device performs a measurement of the energetic structures of over 540 body objects in less than 10 minutes. The results are displayed immediately on the laptop monitor.

The patient's measurement results enable you to use your treatment methods on target. In case you already are a Vitalfeld therapist⁽⁴⁾, you can use the program suggestion displayed automatically after the measurement by starting your MitoSan or MitoPlus device directly.

You may also, using a patient's existing measurements, perform an automatic verification of the energetic correspondence between the body's own spectra and more than 3000 digitised substance spectra. If you are a user of DigiSoft, the substances are instantly provided to DigiSoft. Up to 20 substances may be transferred directly to the DigiSoft treatment plan. Additionally, it is indicated whether a substance can be treated with Global Diagnostics and/or DigiSoft, whereupon the substance is included in the respective treatment plan.

The software module "therapy", available on request, provides the additional option of treatment by administering a weak signal within the frequency range of 4 KHz to 400 MHz. An initial and final amplification (finer gradation) may be determined for every therapy individually. Up to 16 entries, including rest periods, may be recorded in the treatment plan. A total of five different therapy options is available:

1. Each measurement identifies, among others, the **individually harmful frequencies** for the patient. The very same harmful frequencies may be treated specifically right after a measurement.
2. The therapy option **Single frequencies** enables you to set 10 single frequencies with very high precision (accuracy of 0,0001%) and to use them therapeutically.
3. In the therapy option **Body systems**, the patient's body systems that need therapeutic support may be selected from a multiple selection list for a stabilizing treatment.
4. According to the **Global Scaling Theory**, different frequency ranges showing similar characteristics may be combined into a treatment mode. The therapy module offers 3 different treatment modes based on Global Scaling, namely "compress", "decompress" and "special".
5. **Multiple-frequency therapy** offering more than 240 treatments for bacteria, viruses, fungi, mites, parasites.

Global Diagnostics

Your most accurate and fastest assistant for diagnosis

Full-body measurement

In less than 10 minutes, over 100 million distinct measurements are performed and verified in a second test.

Visual analysis

Over 540 body objects may be analysed (functions, organs, systems etc.).

3D Graphics:

Organs, blood vessels, nerves, lymph, the skeleton and the brain are presented in three different views.

In every graphic, the respective body objects are displayed – they may additionally be highlighted in yellow for learning purposes.

The view can be enlarged using the zoom function; it can be turned and as you move the mouse over the graphic, the respective object name is displayed.

The chosen angle and the size of the display detail are retained from one view to the next (e.g. skeleton – nerves – blood vessels etc...).

¹⁾ Extract from a study on the reverse

²⁾ PC-based control of the MitoSan-device (see number 4 below)

^{2a)} Software belonging to the MitoPlus-device (see number 4 below)

³⁾ Digitised substance spectra for test and treatment purposes

⁴⁾ Therapy system developed by VITATEC using therapeutic signals to help the body to restore its cellular energy level. The devices employed: MitoSan or MitoPlus.

⁵⁾ Allow a few days between individual measurements.

VitalfeldTherapy

Global Diagnostics

measuring

analysing

treating

The new Global Diagnostics was assessed in a first study – it concludes: **Accurate measurement data and reliable results.**

In 2007, at the University Hospital Graz, Prof. Dr. Martie Truschnig-Wilders, head of the Clinical Institute of Medical and Chemical Laboratory Diagnostics, carried out an independent analysis of patient data provided by German medical doctors. Conventional medical parameters of 44 patients were compared with the respective Global Diagnostics measurement results.

Quoting from the study: "For all patients included in the study, the main diagnoses, established by conventional medical methods, were confirmed by the "Global Diagnostics" system: a conclusive correlation between the results of the "Global Diagnostics" measurements and the diagnostic findings established by conventional methods was achieved..."

"... Particularly noteworthy is the so far not addressed potential of this bioenergetic examination: It may reveal hidden or incipient pathological processes that, at that stage, cannot be detected by conventional medical methods."

Advantages at a glance

- Measurement procedure lasting less than 10 minutes
- Over 100 million single measurements verified by a control check
- Integrated electrosmog measurement to detect external interference
- Automatic measuring and data processing
- Treatment suggestions based on the patient's measurement results
- Additional integrated therapy module available on request
- Automatic analysis of more than 3000 digitised substance spectra, placing no strain on the patient
- Identification of the electromagnetic reaction to any substances like e.g. dental material
- Non-invasive measurement
- CE marking in accordance with the EU Medical Device Directive (93/42/EEC)
